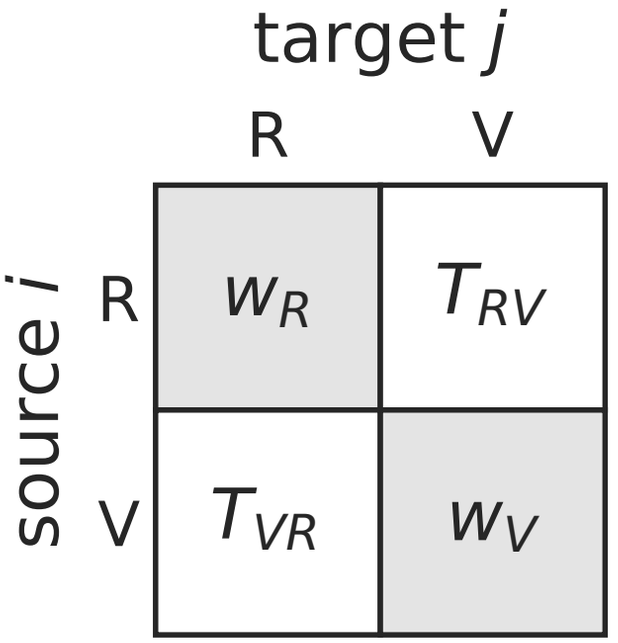
(a)



$$\log \bar{\tau}_{ij} = \tfrac{1}{2} \log \frac{T_{ij}\, T_{ji}}{w_i\, w_j}$$

$$r_{ij} = \log \frac{T_{ij}\, w_i}{T_{ji}\, w_j}$$

diagonal: white-box rate

(b)

$$\log T_{ij} = \log w_j + \log \bar{\tau}_{ij} + \tfrac{1}{2}\, r_{ij}$$

vulnerability · similarity · direction

$\langle \cdot \rangle_P$: mean over a fixed CNN panel $c \in P$

(c)

$$\sigma_m = \langle \log \bar{\tau}_{mc} \rangle_P \qquad \rho_m = \langle r_{cm} \rangle_P$$

panel similarity · direction (m as target)

(d)

$$G = (\sigma_R - \sigma_V) - \tfrac{1}{2}(\rho_R - \rho_V)$$
