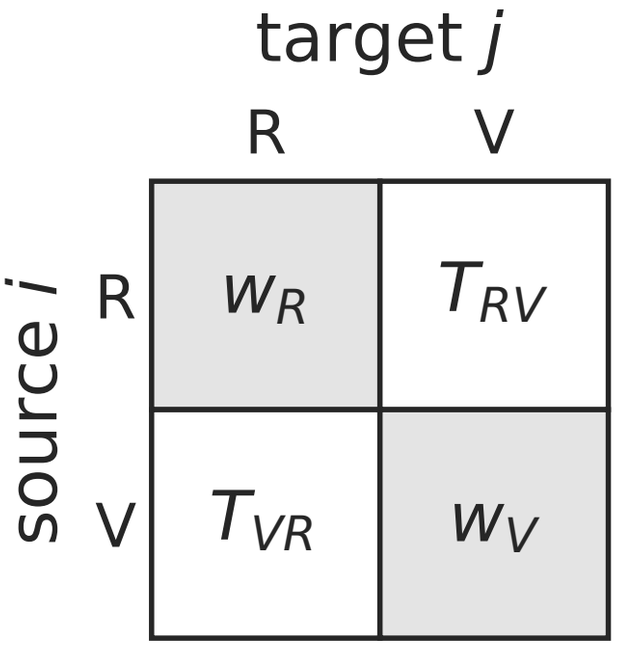
(1)



$$\log \bar{\tau}_{ij} = \frac{1}{2} \log \frac{T_{ij} T_{ji}}{w_i w_j}$$

$$r_{ij} = \log \frac{T_{ij} w_i}{T_{ji} w_j}$$

diagonal: white-box rate

(2)

$$\log T_{ij} = \log w_j + \log \bar{\tau}_{ij} + \frac{1}{2} r_{ij}$$

vulnerability · similarity · direction

mean over a fixed CNN panel $c \in P$

(3)

$$\sigma_m = \overline{\log \bar{\tau}_{mc}} \qquad \rho_m = \overline{r_{cm}}$$

panel similarity · direction (m as target)

(4)

$$G = (\sigma_R - \sigma_V) - \frac{1}{2}(\rho_R - \rho_V)$$

source gap · symmetric part · directional part
