Üslup 7 (seçilen)

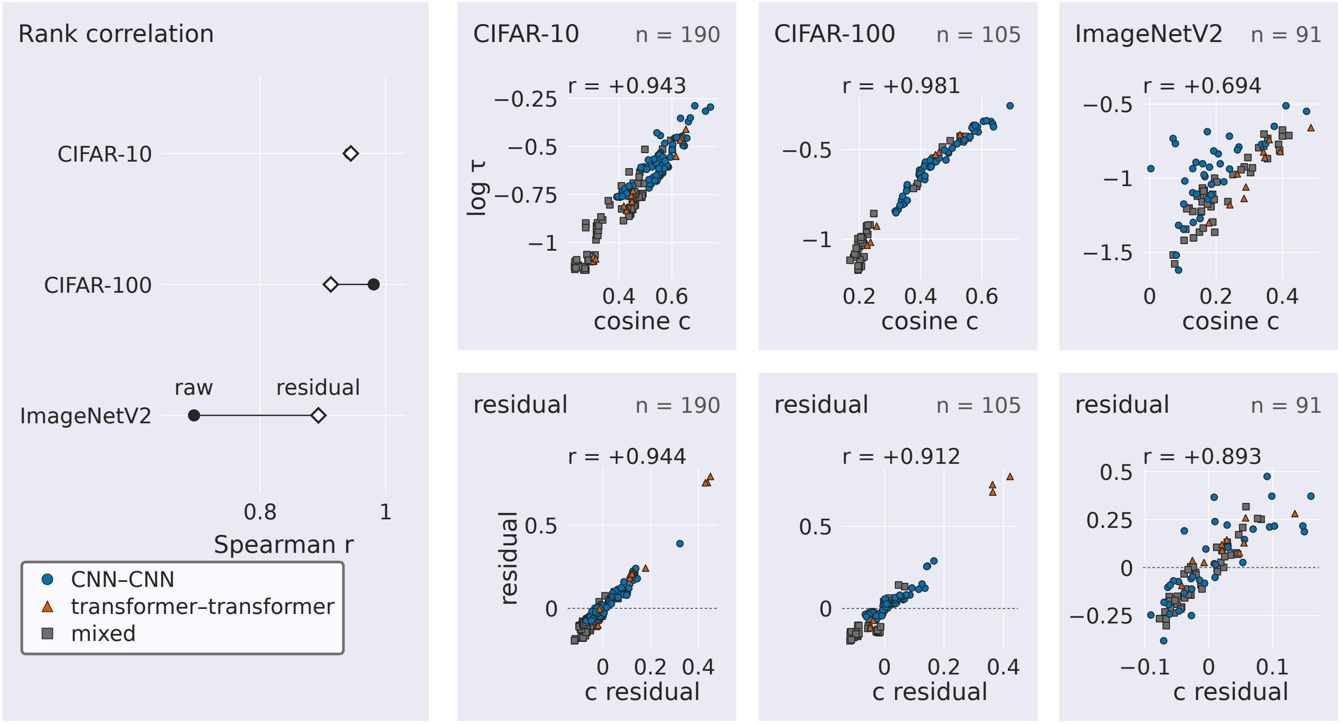

Figure 7. Input-gradient cosine on clean images against pairwise symmetric similarity for every model pair on CIFAR-10, CIFAR-100 and ImageNetV2, raw in (a) to (c) and with additive model main effects removed from both matrices in (d) to (f). The rank correlation is positive in all six panels, and the permutation p is at its floor in every case (the Mantel table).
